

MOLTOUR

BRINGING CHEMICAL
SUBJECT MATTER
TO LIFE

MOLTOUR

Think of a drug you recently encountered. Can you imagine its structure in 3D?

This task is difficult, even for a small-molecule drug. But what about the structure of the target this drug binds to in the body? We will help!

MolTour is a molecular visualizer and didactic method to stimulate active learning. Designed to be an easy add-on to existing chemistry and life sciences courses, MolTour can immerse you in the spatial world of molecules with its 3D and VR capabilities.

Want to see molecules? Or help your students understand the chemistry of life? Contact us
